

## Restylane® Lidocaine – Instructions for Use

<b>Composición</b>	
Hyaluronate acid, stabilized	20 mg/ml
Lidocaine hydrochloride	3 mg/ml
Phosphate buffered saline	q.s ad 1 ml

**Description**  
Restylane Lidocaine is a sterile, transparent, biodegradable gel stabilized hyaluronic acid of non-animal origin with the addition of 0.3% lidocaine hydrochloride. It is supplied in a glass syringe. The contents of the syringe are sterilized using gamma heat. The product is a single use only (29G TW (thin-wall) should be sterilized using ethylene oxide alone provided) to ensure traceability the patient record label (part of the syringe label) should be attached to patient records.

**Intended use**  
This product is intended to be used for facial tissue augmentation. It is recommended to be used for the correction of wrinkles and for lip enhancement. It should be injected into the middle part of the dermis layer or in the subcutaneous layer of the face. The risk of infection is minimized by tissue support and soft tissue cover, e.g. periorbital region, injection into the subcutaneous fatty tissue or supraperiosteal administration are recommended. The addition of lidocaine provides a pain relieving effect.

Before the first treatment session, it is recommended to contact your local Galderma representative or Restylane distributor for more information about injection techniques and training opportunities. This product is only intended to be administered by authorized personnel in accordance with local legislation.

**Mode of action**  
This product is a filler that adds volume to the tissue, thereby restoring the skin contours or enhancing the lips to the desired level of correction. The volume and the lifting capacity originate from the ability of stabilized hyaluronic acid to bind water.

**Contraindications**  
Do not use in patients with a history of hypersensitivity to tetracycline proteins, as the product may contain trace amounts of such material.  
Do not use in patients with severe allergies manifested by a history of anaphylaxis or history or presence of multiple severe allergies.  
Do not use in patients with known hypersensitivity to lidocaine or to amide-type local anesthetic.

**Warnings**  
Use a specific site where there is active disease, such as infection (skin eruption, abscess, cysts, pimples, rashes or hives), infection or tumors, in or near the intended treatment site should be avoided until the underlying condition is fully healed.  
This product must not be injected intramuscularly or intracranially. Localized superficial necrosis and scarring may occur after injection in or near vessels, such as the nose and glabella area. It is thought to result from the injury, obstruction or compression of blood vessels. Special caution should be taken if the patient has undergone a prior surgical procedure in the planned treatment area. Areas with limited collateral blood flow have an increased risk of ischemia. Aspiration prior to injection is recommended. Unintentional introduction of soft tissue fillers into the vasculature in the face may lead to embolization, occlusion of the vessels, ischemia, necrosis or infarction in the injected tissue. Areas at risk of ischemia include the lips, nostrils, and the bridge of the nose. Areas at risk of ischemia include the forehead, temples, and the bridge of the nose. Areas at risk of ischemia include the forehead, temples, and the bridge of the nose.

Considerations should be given to the total dose of lidocaine administered if dental block or topical anesthesia of lidocaine is used concurrently. High doses of lidocaine (more than 400 mg) can cause acute toxic reactions manifesting as symptoms affecting the central nervous system and cardiac conduction.

Patients should receive prompt medical attention and possibly evaluation by an appropriate health care practitioner specialising in an intravascular injection occur.  
Patients with bleeding disorders or patients using substances that affect blood clotting, such as thrombolytics or anticoagulants may, as with any injection, experience increased bruising or bleeding at injection site.  
This product should not be mixed with other products or used to dilute the product.

**Precautions**  
Health care practitioners are encouraged to discuss all potential risks of soft tissue injection with their patients prior to treatment and ensure that patients are aware of potential risks and potential complications.  
This product should only be used by health care practitioners who have appropriate training, experience, and knowledge about the anatomy and around the site of injection to minimize the risks of potential complications (perforation or compression of vessels, nerves and other vulnerable structures).

Injection procedures are associated with a risk of infection. Aseptic technique and standard practice to prevent cross-infections are to be followed.  
Avoid injecting into areas in close proximity to permanent implants, as this could aggravate latent adverse events or interfere with the aesthetic outcome of the treatment. Limited data is available on injecting into an area where a non-permanent implant other than hyaluronic acid was previously placed.

Injection into superficially, or in facial areas with limited soft tissue support, or soft tissue cover, or thin skin, such as the periorbital area, may result in contour irregularities and palpable lumps and/or bluish discoloration.  
Injection in the lower periorbital region in patients with pre-existing pterygium dark lower eyelid formation and pre-existing tendency toward ocular eye circles may be associated with prominent discoloration and excessive watering of the fluid build-up.

Post inflammatory pigmentation changes may occur after dermal filler injections in people with dark skin (Fitzpatrick type IV-V).  
Infection procedures can lead to reactivation of latent or subclinical herpes viral infections.  
This product should be used with caution in patients on immunosuppressive therapy.  
Patients with unrealistic expectations are not suitable candidates for treatment.

This product is packaged for single use. Do not reutilize. Do not use the product if package is opened or damaged, or if there is any damage to the number 1 syringe.  
Patients should avoid excessive sun, UV lamp exposure and extreme temperatures at least until any initial swelling and redness has resolved.  
Do not use the product if there is any pain, redness, or other procedure based on active dermal reaction is performed after treatment with this product there is a theoretical risk of eliciting an inflammatory reaction at the implant site. This also applies if the product is administered after the skin has healed completely after such a procedure.

The safety for use during pregnancy, in breastfeeding females or in patients under 18 years has not been established.  
Individual variation and treatment area may affect the bio-degradation of this product, in rare cases product remains have been detected in tissue when the clinical effect has returned to baseline.  
If necessary, any necessary in adequately treated infections may progress into complications such as abscess formation.

Treatment using only oral corticosteroids without concurrent antibiotic treatment is not recommended. The prolonged use of any medication, e.g. corticosteroids or antibiotics in treatment of adverse events has to be carefully assessed, since this may carry a risk for the patient. In case of persistent or recurrent inflammatory symptoms, consider removal of the product by aspiration/drainage, extrusion or enzymatic degradation (use of hyaluronidase has been described in literature). Before any removal procedure is performed, the swelling may be reduced by using NSAID for 2-7 days or a short course of corticosteroids for less than 7 days, in order to more easily resolve a hypoechoic cyst.

For patients who have experienced clinically significant reactions, a decision for retreatment should take into consideration the cause and significance of previous reactions. For reporting of adverse events contact your local Galderma representative or distributor for this product.

**Performance**  
Results from a controlled multicentre study with Restylane for the correction of nasolabial folds, 74% of subjects maintained a clinically significant improvement up to at least 6 months after treatment.  
Results from a controlled multicentre study with Restylane for the correction of nasolabial folds, 74% of subjects maintained a clinically significant improvement up to at least 6 months after treatment.

**1/1 000 – 1/10 000** Swelling/oedema with immediate onset and onset up to several weeks after treatment. Mass/induration.  
**1/10 000 – 1/100 000** Short duration of effect, Erythema, Pain/tenderness, Bruising/bleeding, Deformity/malposition, Papules/nodules, Infection/abscess including pustules, cellulitis and purulent discharge, Discoloration/hyperpigmentation, Ischemia/necrosis including livedo reticularis, necrosis and vascular occlusion. Other injection site reactions and skin reactions including burning sensation, edema, irritation, discomfort, dryness and warmth, Inflammation, Hypersensitivity/oedema. Eye disorders including eye, eye irritation, eye pain, swelling, eyelid ptosis, increased lacrimation and visual impairment such as blindness, blurred vision and reduced visual acuity. Neurological symptoms including tingling, numbness, pruritus, tingling, numbness, Pruritus, Eruption of device, Scarification/abrasion.  
**<1/100 000** Device displacement, Granuloma/foreign body reaction, Reactivation of herpes infection, Rash, Blisters/vesicles, Capillary disorders such as telangiectasia, extravasation, Acne, Urticaria, Dermatitis, Muscle disorders including muscle twitching and muscular weakness, Emasculation, Dermatomyositis, Other dermatological effects including localized alopecia and alopecia areata, non-dermatological effects including angioedema, arthralgia, asthenia, depression, dizziness, dysphagia, dyspnoea, fatigue, headache, myalgia, pyrexia, influenza like illness, insomnia, sinusitis and sinusitis.

**Assembley of needle to syringe (see pictures)**  
1. Put on sterile gloves.  
2. Use your thumb and forefinger to hold firmly around both the syringe-barrel and the lock-adapter part (C) together.  
3. With your other hand, take hold of the top cap (A) at the end of the closure system and bend (do not rotate) until the cap disconnects and can be pulled off (tamper proof break-off).  
4. Do not touch the syringe tip (B) to keep it sterile.  
5. Open the needle and spring the needle shield.  
6. Assemble to hold both the syringe barrel and the lock-adapter together.  
7. To facilitate proper assembly, both push and rotate the needle firmly clockwise.

8. Make sure the needle is screwed on all the way so that the needle shield turns to the correct position.  
9. To remove the needle shield, hold the syringe and the lock adapter. With your other hand hold the needle shield and pull straight out. Do not rotate.

## Restylane® Lidocaine – Gebrauchsinformation

<b>Zusammensetzung</b>	
Schmelztablette Hyaluronid	20 mg/ml
Lidocainhydrochlorid	3 mg/ml
Phosphatpuffernde Kochsalzlösung	q.s ad 1 ml

**Eigenschaften**  
Restylane Lidocaine ist ein steriles, transparentes, biologisch abbaubares Gel aus nicht-animalen, stabileren Hyaluronsäure mit einem Zusatz von 0,3 % Lidocainhydrochlorid. Es wird in einer Glasinjektor in einem sterilen, geschweißten Behälter mit Wasserddampf sterilisiert. Das Produkt ist nur zur einmaligen Verwendung vorgesehen. Festsitz-Ethylendioxid-Residuen, dünwandige Umhüllungen (29G TW (thin-wall) oder 29G TW (thin-wall)) sind sterilisiert. Als Anwendungsgebiete sind die Kniekehle, die Nase, die Lippen, die Nasenwurzel (mit Restylane Lidocaine) und die Nasenwurzel (mit Restylane Lidocaine) der Kategorie 1 bei Patienten bei Behandlung.

**Anwendungsbereich**  
Dieses Produkt ist für den Aufbau des Gesichtsgewebes geeignet. Es empfiehlt sich, die Injektionen in einem Bereich oberhalb der Lippen, der Nase, der Nasenwurzel, der Nasenwurzel und der Nasenwurzel zu machen. Die Injektionen sollten in einem Bereich oberhalb der Lippen, der Nase, der Nasenwurzel, der Nasenwurzel und der Nasenwurzel zu machen.

**Warnhinweise**  
Bei diesem Produkt handelt es sich um einen Füller, der dem Gewebe Volumen zuführt und so die Hautkonturen wiederherstellt oder die Lippen bis zum gewünschten Karaturniveau modelliert. Das Volumen wird durch die Injektion in die gemäß den geltenden Rechtsvorschriften hierzu bereitgestellten (in Deutschland Auszubereite der Heilberufe).

**Gegegnungen**  
Nicht bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich. Bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich. Bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich.

**Warnhinweise**  
Die Anwendung an Stellen, wo eine aktive Erkrankung vorliegt, z.B. Entzündungen (Hautentzündungen, Infektionen oder Tumoren) in den behandelnden Bereich oder in dessen Nähe ist zu vermeiden. Dieses Produkt darf nicht intramuskulär oder intravaskulär injiziert werden. Bei Injektionen in oder in der Nähe von Blutgefäßen ist besondere Vorsicht zu walten, kann es zu einer örtlich begrenzten, oberflächlichen Schwellung (Bluterguss) kommen. Dies ist vor allem dann der Fall, wenn es sich um eine Verletzung, einen Verschluss oder einer Schädigung von Blutgefäßen. Besondere Vorsicht ist zu walten, wenn es sich um eine Verletzung, einen Verschluss oder einer Schädigung von Blutgefäßen. Besondere Vorsicht ist zu walten, wenn es sich um eine Verletzung, einen Verschluss oder einer Schädigung von Blutgefäßen.

Schmerzen während des Eingriffs oder kurz danach. In Einzelfällen ist eine Injektion in die Lippen möglich. Patienten umgehend medizinisch beachtet und eventuell von einem entsprechenden Facharzt beobachtet werden.  
Bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich. Bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich. Bei Patienten/Patienten mit anamnestisch bekanntem Überempfindlichkeitsreaktion gegen Sproteinkomplexe-Proteine anwendungsbereich.

**Vorsichtsmaßnahmen**  
Die Ärzte sind angehalten, vor der Behandlung sämtliche Risiken (siehe Anwendungsbereich) des Produktes zu erläutern.
