

For Life

Nestlé Skin Health

For Life.

As life changes, so does our skin and the need to protect and nourish it.

With a global population living longer, skin care is more important than ever.

At Nestlé Skin Health, we are helping people across the world look and feel better about themselves.

Protecting

When you need it most

Stuart Raetzman
CEO of Nestlé Skin Health S.A.

Enhancing quality of life through innovative skin health solutions.

Throughout our lives, our skin plays a vital role in protecting our body. But it doesn't stop there.

Today we recognize the important part skin plays in our overall well-being. When compromised, it can alter our self-esteem and influence the way we interact with others. Skin health has a major impact on our quality of life.

We are also witnessing changes in patient and consumer expectations. People are not only living longer, they also have increasing access to information. When they consult their healthcare or aesthetic practitioner, many already understand that their skin health may be related to their lifestyle, and want to know more. These interactions with consumers,

patients and experts inspire us to constantly look for new ways to meet the skin health needs of people all over the world.

At Nestlé Skin Health, our vision is to change the way the world thinks about skin health. That's why we work with healthcare professionals and academia from all disciplines to investigate new approaches and technologies, correlations between nutrition and skin health, and reward extraordinary community initiatives in skin health.

Unique insights and increased investments enable us to drive disruptive and distinctive innovation in medical treatments and consumer products that are truly different. We affirm our commitment to consumers, patients and healthcare professionals alike.

Our skin does a lot for us. Let's give it the importance it deserves.

Correcting

When feeling good really matters

Skin Function

The skin is a "living barrier" whose main function is to protect the body from external threats (UV radiation, dehydration, trauma). It also plays an immunological role by preventing infection from entering the body. Thanks to the nerves under the skin, we are able to touch and feel and therefore interact with the outside world.

3,000

At least 3,000 skin diseases are thought to exist.

UV radiation and smoking are the major external causes of skin aging.

1 in 3

One out of three cancers diagnosed is skin cancer.

With the incidence of non-melanoma and melanoma skin cancers on the increase worldwide, skin cancer is one of our key therapeutic areas.

Melanin

Skin color is determined by the amount of melanin produced by the melanocytes, the cells present in the basal layer of the epidermis. Everyone has the same amount of melanocytes, but not everyone produces the same amount of melanin. The more melanin the body produces the darker the skin is.

85%

An estimated 85% of people will suffer from acne at least once in their lives.

We know the impact acne can have on people's quality of life. We are committed to developing and delivering innovative science-based solutions to help them manage this socially disabling condition.

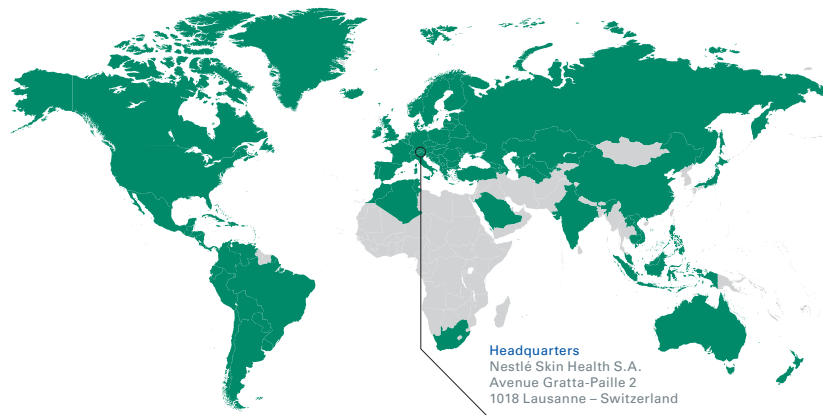

Nourishing

To overcome the skin's daily challenges

Worldwide presence

Nestlé Skin Health is
a global leader focused
on meeting the world's
increasing skin health needs.
